

# Connectivity Demands for Healthcare are Changing. Is Your Provider Ready?

The ability to securely and reliably share electronic healthcare information in real-time can be a matter of life and death. When lives are on the line, doctors and healthcare facilities need a powerful network to share vital information instantly and connect caregivers and patients for better outcomes.

The next decade will show just how transformational the role of telecommunications in local, regional and national healthcare will become. At the core will be an emerging need for faster, higher-quality broadband connections at every level of the healthcare delivery process.

## **What this Means for Patients**

Wearable devices, mHealth, and the Internet of Things (IoT) create new opportunities for physicians to monitor, evaluate and intervene in patients' daily health management—all demanding more bandwidth and security, faster response times, and more evolved data storage and analytics services.

## **What this Means for Healthcare Providers**

Telemedicine promises to connect physicians to more patients in remote areas, while clinical applications, electronic

***New demands can bring legacy telecommunications infrastructure to its knees, putting hospitals, private practices and other caregivers behind the service delivery curve.***

health records and healthcare IT platform stack components become more available—all of which asks more of telecommunications networks than ever before.

## **Why partner with iRIS Networks?**

- Connect multiple locations seamlessly
- Able to scale from 100M to 100G
- Built for data-intensive applications
- Directly connect to 250+ rural communities in TN, AL and KY

# Better patient care within reach.

## The iRis Networks Reach

iRis provides high-capacity bandwidth and a cutting-edge communications and technology platform to Tennessee's healthcare organizations, rivaling that of larger carriers while surpassing them in customer service and care. We've designed our carrier network to truly be 'around the corner' for our customers—and still serve you around the world.

Whether your patient is in Tusculum, Toronto, Torreón or Tokyo, they'll see crisp, high-definition telemedicine pictures and benefit from instant patient information-sharing, putting you around the corner from your patients at any time, day or night.

- Super-fast loading times, empowering connected healthcare applications
- Cutting-edge transport layer for lightning-fast speeds and reasonable prices

***We think our combination of world-class transport through fast, reliable broadband and unparalleled customer engagement is a special one. We invite you to experience the difference.***

- Five nines of uptime on the state's most reliable carrier network
- World-class transport platform featuring global interconnect reach
- Fast, reliable broadband with unparalleled customer engagement and service

## The iRis Networks Difference

We offer healthcare organizations the hands-on, local support and service you need for better peace of mind and a better user experience—for both physicians and patients. Our specially designed healthcare solutions connect patients and physicians in every way you need to be connected, while continually striving for improvement and

network evolution. You'll notice the difference that an iRis Networks partnership makes from day one.

- Program discounts for new and loyal customers alike
- Access to dedicated support and highly knowledgeable technicians
- Annual account reviews and workshop sessions to make sure you're getting the best out of your network solutions
- Continual evaluation and implementation of new healthcare communication trends
